Last Updated Saturday, 16 December 2006

There are a few things which you really consider as achievement in your professional life. Some are complex projects, other are things you could not imagine and still cannot imagine after they are done.

One of these achievements is being published on IBM's developerWorks. Hal and me spent quite some hours writing this paper on extending IDS (IBM Informix Dynamic Server) through the use of UDR and specially how to produce a consistent development environment based on Eclipse.

I hope you will have as much pleasure reading us as we had writing it, checking it and XMLing it.

Being published on your 35th birthday adds a bit to it…
